

On MUSE data reduction: Exposures Alignment & useful tips

Elena Valenti

User Support Department

Outline

- Where to look for information and help
- MUSE data reduction in a nutshell
- ESOREX vs ESOREFLEX
- Master calibrations: useful shortcut ..
- Interactive exposures alignment (Live Demo)
- Stacking exposures from multiple OBs

Information & Help

■ User Manual and Instrument web pages

<https://www.eso.org/sci/facilities/paranal/instruments/muse/doc.html>

<http://www.eso.org/sci/facilities/paranal/instruments/muse.html>

■ Pipeline Manual:

<https://www.eso.org/sci/software/pipelines/>

<ftp://ftp.eso.org/pub/dfs/pipelines/instruments/muse/muse-pipeline-manual-2.8.3.pdf>

■ Reflex Manual:

<https://www.eso.org/sci/software/pipelines/>

<ftp://ftp.eso.org/pub/dfs/pipelines/instruments/muse/muse-reflex-tutorial-16.0.pdf>

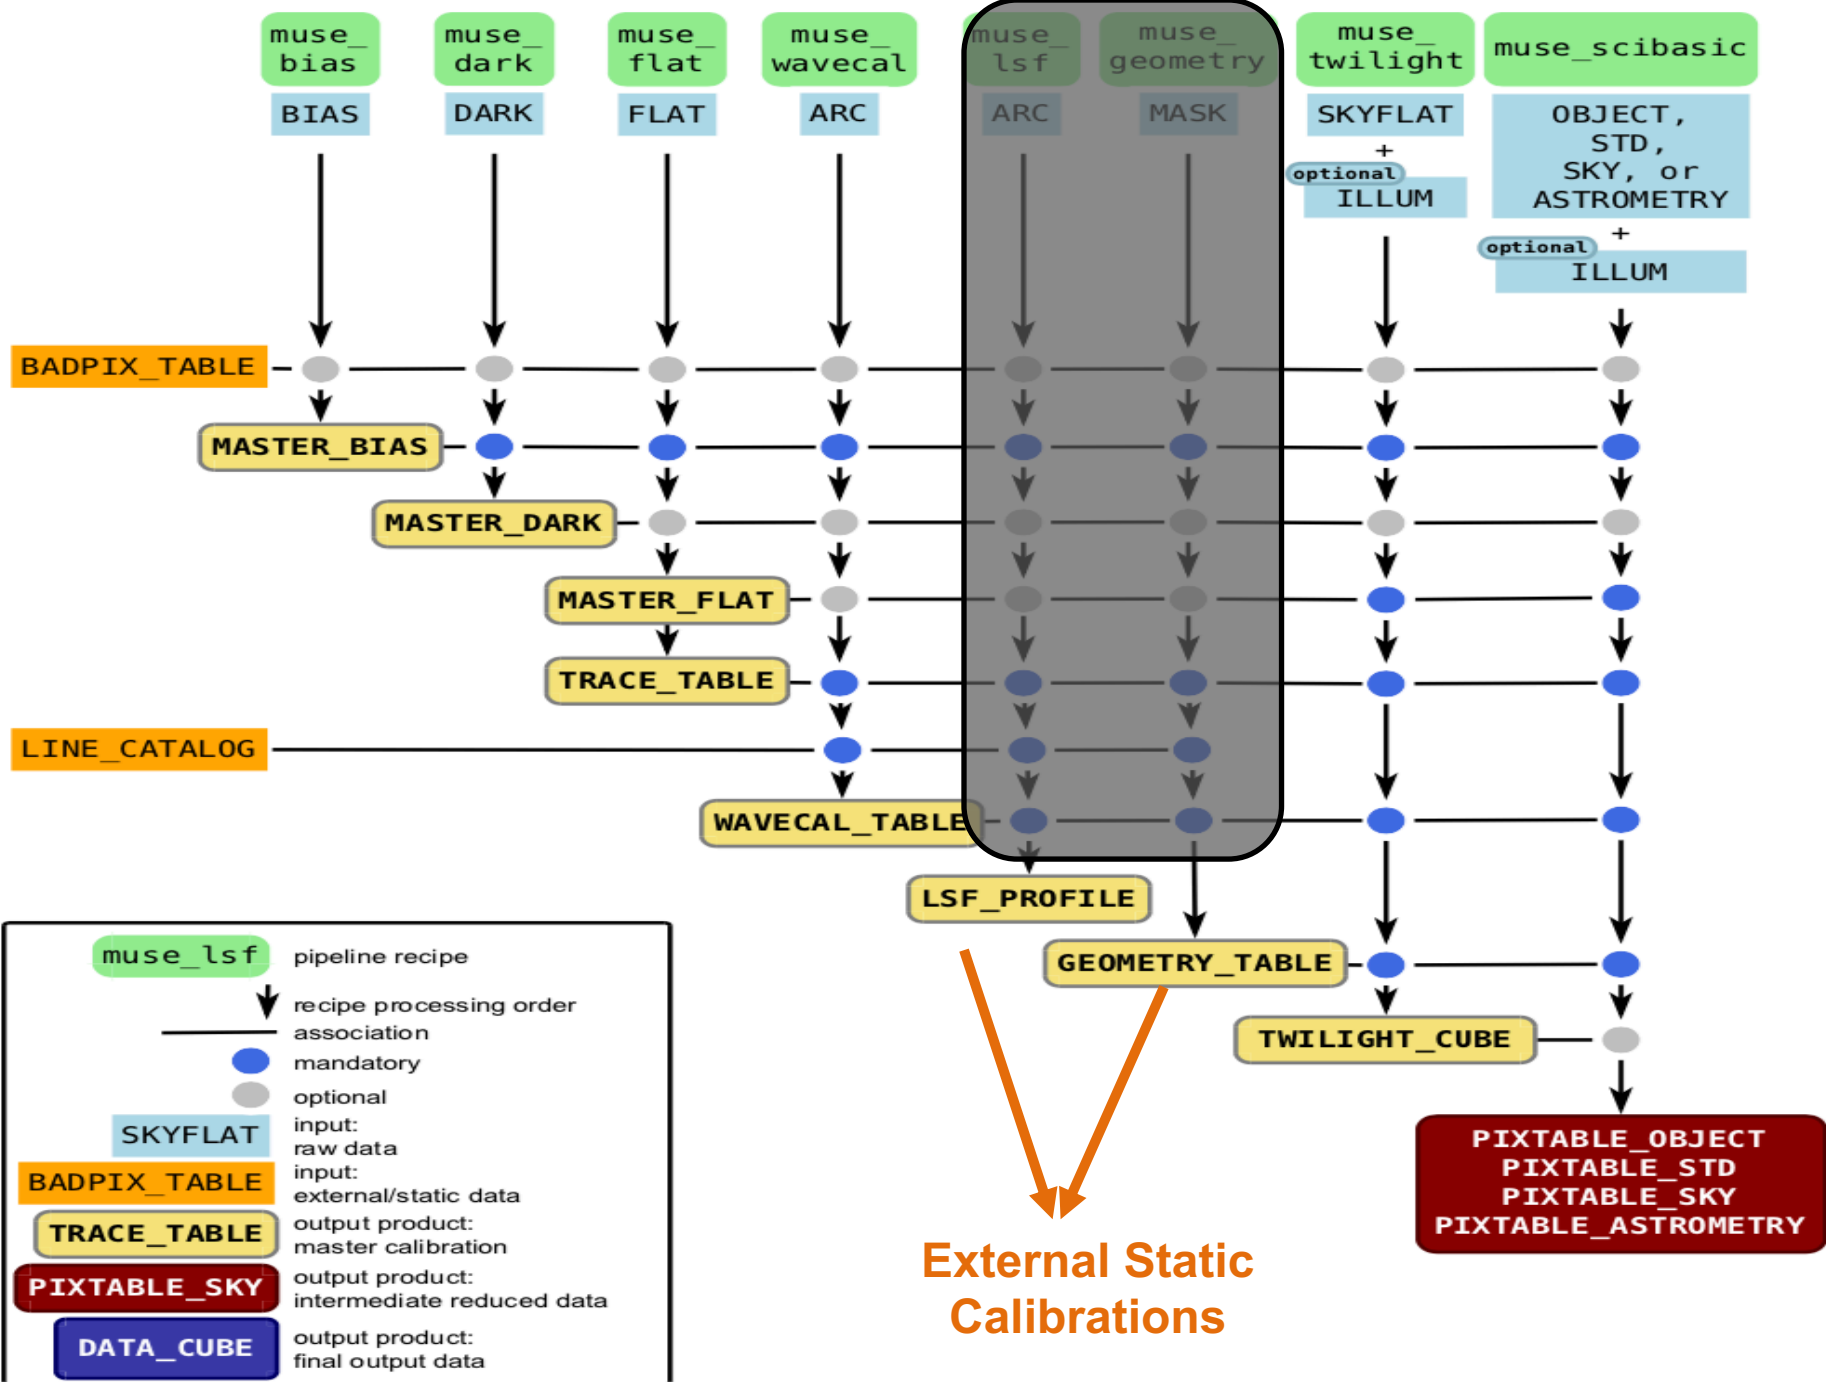

<ftp://ftp.eso.org/pub/dfs/pipelines/instruments/muse/muse-zap-reflex-tutorial-5.0.pdf>

■ Help: usd-help@eso.org

Data reduction in a nutshell

■ STAGE 1

7 basic calibration and a pre-processing recipes (i.e., basic science reduction) working on data of individual CCDs → characterize and remove the signature of each IFU

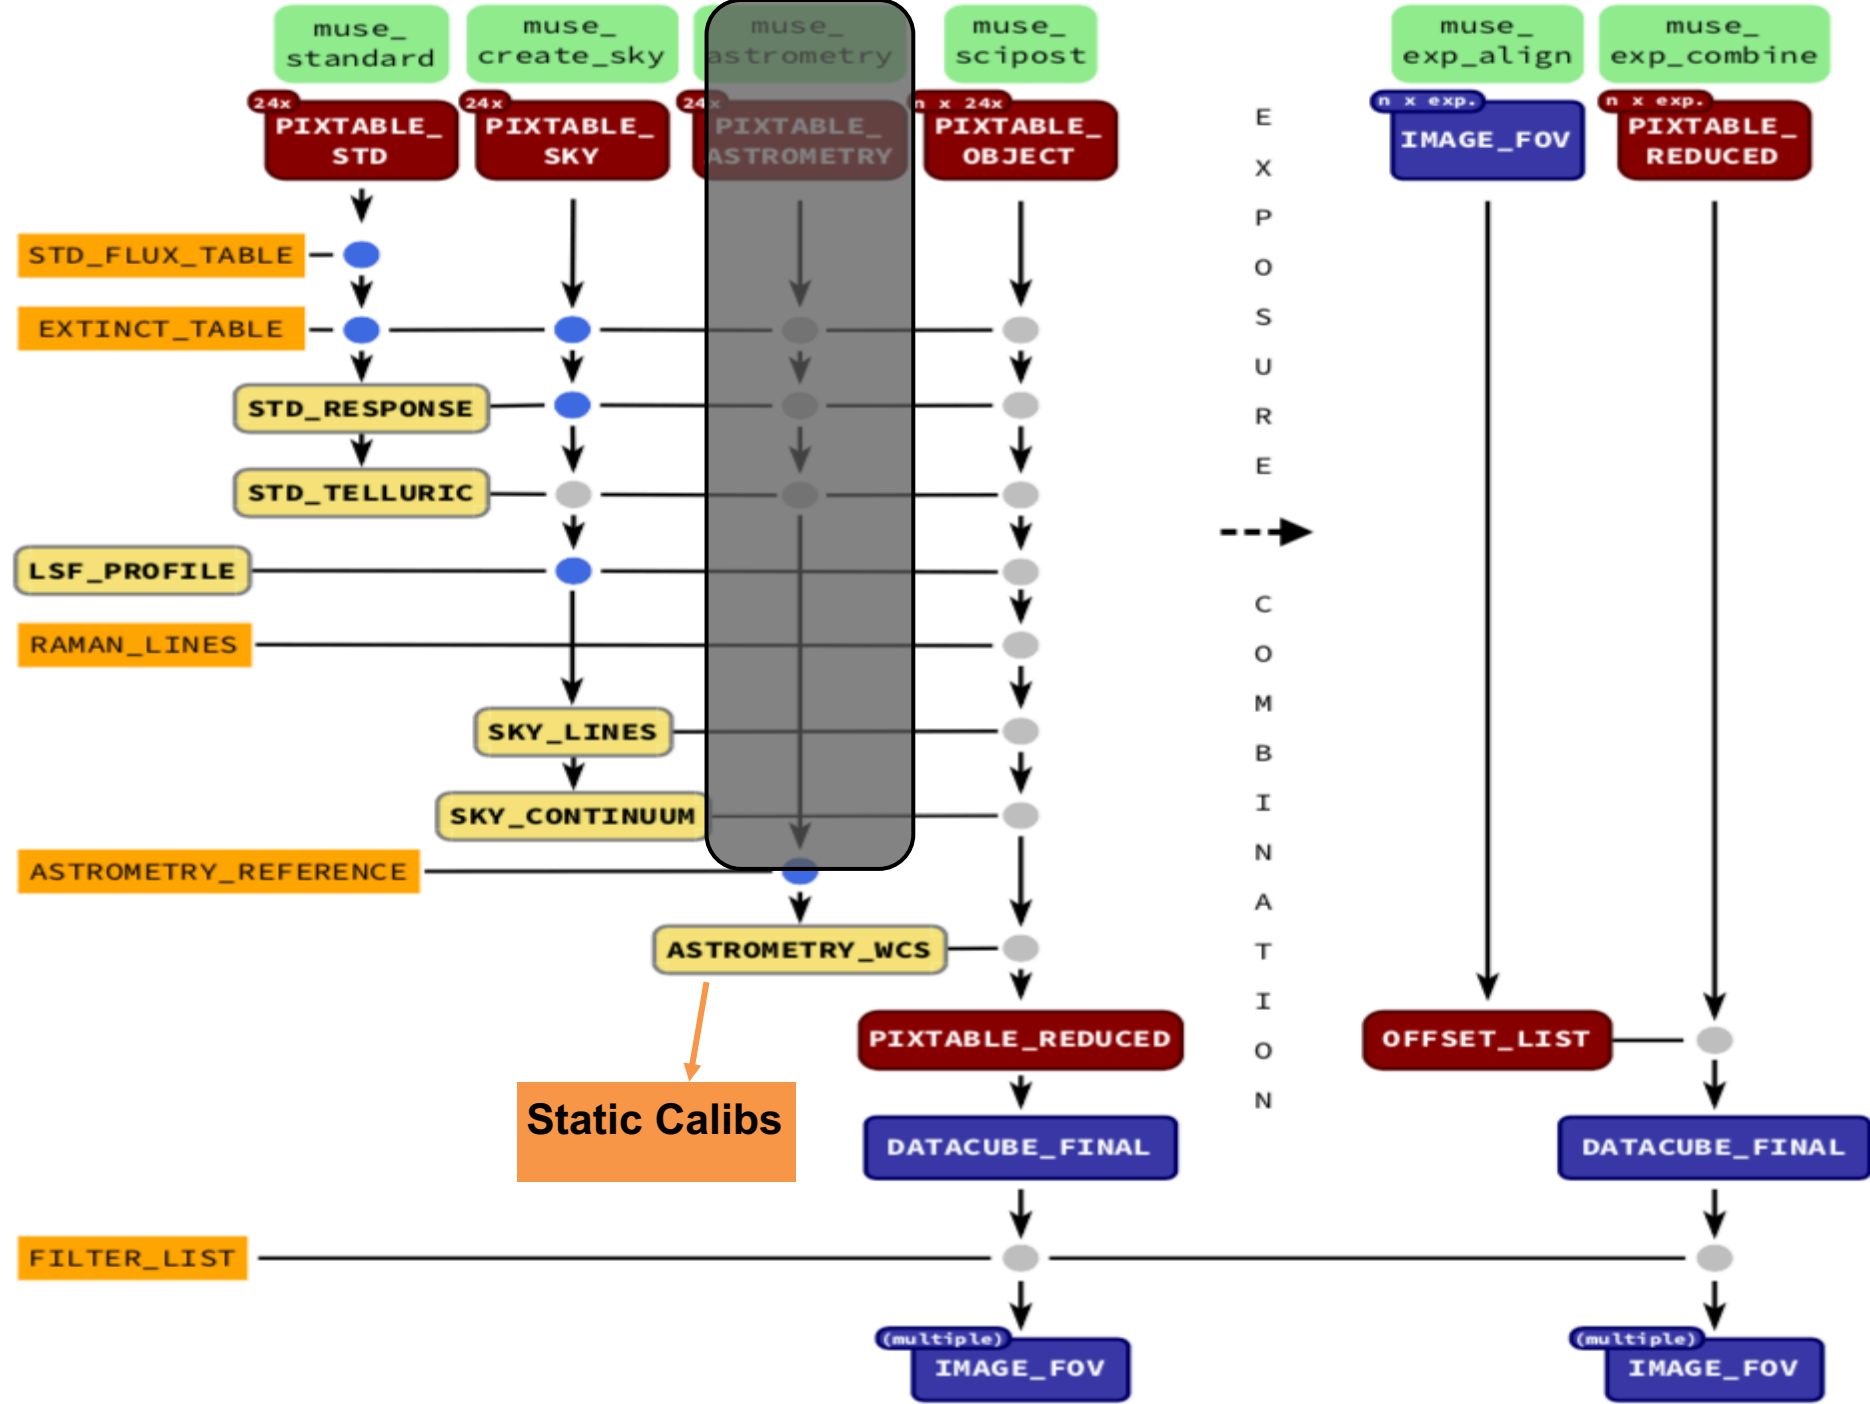

Data reduction in a nutshell

■ STAGE 1

7 basic calibration and a pre-processing recipes (i.e., basic science reduction) working on data of individual CCDs → characterize and remove the signature of each IFU

■ STAGE 2

3 additional calibration and a final science recipe that combine the data from all IFUs of one or more exposures into a final unique data cube

■ Command line tool

➤ `esorex [esorex options] [recipe [recipe options] [sof [sof]..]]`

➤ `esorex -log-file=align.log muse_exp_align -rsearch=4,2,0.8,0.2 -nbins=8 align.sof`

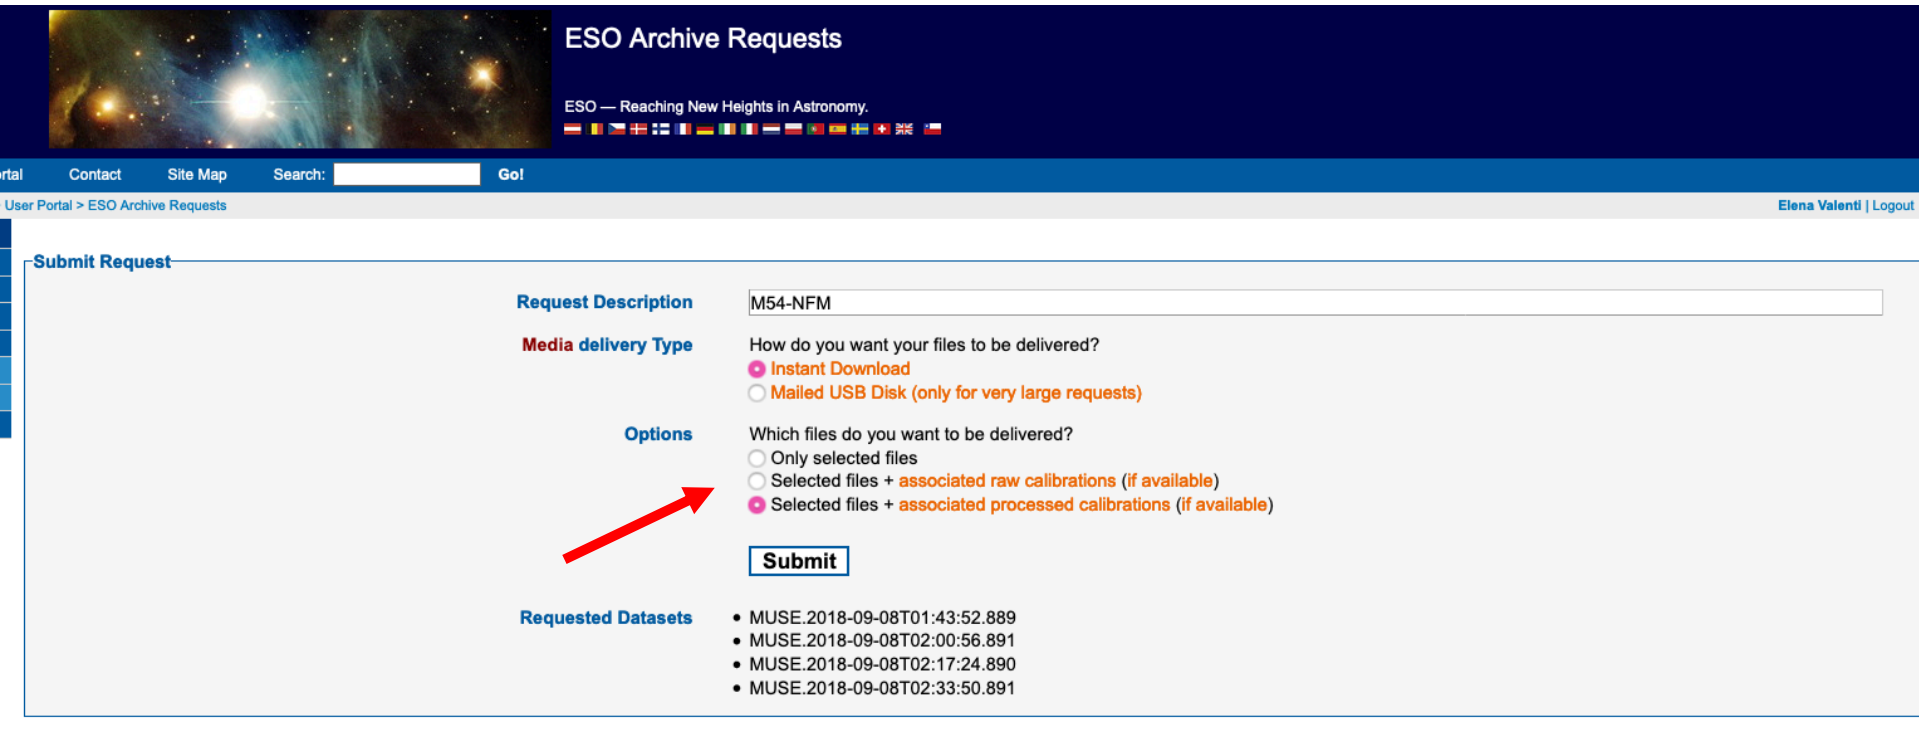

■ Very versatile

■ Manual data classification

- GUI based tool that calls individual reduction recipes via the esorex command
- Automatic data classification (OCA rules)
- Automatic execution of all processing steps in the right order
- Rigid (i.e., limited flexibility)

Calibrations: raw vs master

- Raw science data can be associated to a set of raw or master calibration frames

The screenshot shows the ESO Archive Requests submission form. The page title is "ESO Archive Requests" with the tagline "ESO — Reaching New Heights in Astronomy." and a row of international flags. The navigation bar includes "Home", "Contact", "Site Map", a search box, and "Go!". The user is identified as "Elena Valenti | Logout".

The "Submit Request" form contains the following sections:

- Request Description:** A text input field containing "M54-NFM".
- Media delivery Type:** A question "How do you want your files to be delivered?" with two radio button options:
 - Instant Download
 - Mailed USB Disk (only for very large requests)
- Options:** A question "Which files do you want to be delivered?" with three radio button options:
 - Only selected files
 - Selected files + associated raw calibrations (if available)
 - Selected files + associated processed calibrations (if available)
 A red arrow points to this section.
- Submit:** A button labeled "Submit".
- Requested Datasets:** A list of dataset identifiers:
 - MUSE.2018-09-08T01:43:52.889
 - MUSE.2018-09-08T02:00:56.891
 - MUSE.2018-09-08T02:17:24.890
 - MUSE.2018-09-08T02:33:50.891

Calibrations: raw vs master

- Raw science data can be associated to a set of raw or master calibration frames
- Master calibs (i.e., master bias, flats, arc, twilight flat, std) → saving lot of time
- Master calibs are obtained shortly after observations were taken → quality depends upon pipeline version
- SV data(<http://www.eso.org/sci/activities/vltsv/musenfmsv.html>) → best to go for raw calibs
- Data taken within the first 6 months since the new mode was offered → best to go for raw calibs

WFM-NOAO: 01.10.2014 (P94); WFM-AO: 01.10.2017 (P100);

NFM: 01.10.2018 (P102)

ESOReflex

..... **LIVE DEMO**

Stacking exps from multiple OBs

■ Use case:

You want to combine science raw frames belonging to different OBs, which may have been executed in different nights or even within different runs. Of course all exposures must share the same instrument mode (i.e., WFM-AO/NOAO-N, or WFM-AO/NOA-E, or NFM)

■ Remember:

the pipeline combines PIXELTABLE_REDUCED files not DATACUBE_FINAL!

Exposures must be first aligned → i.e., for each exp an IMAGE_FOV file is needed in order to find the X/Y shifts (i.e., OFFSET_LIST).

Only then, the pipeline applies the OFFSET_LIST on the PIXELTABLE_REDUCED and it combines them into a single finale DATACUBE_FINAL

Stacking exps from multiple OBs

■ Esorex:

Procedure-wise, stacking exposures from a single or multiple OBs is pretty much irrelevant.

The pipe cascade must be performed entirely following STAGE 1 and STAGE 2. From the creation of master bias (recipe: `muse_bias`) to the combination of the `PIXELTABLE_REDUCE` corresponding to each exposure (i.e, recipe: `muse_exp_combine`).

If OBs were executed in different nights, remember to create and associate the correct set of master calibs to each exp.

Stacking exps from multiple OBs

■ ESOReflex:

The OCA rules are responsible for the data organization.

Exps are grouped together according to the object name (i.e., header keyword: `HIERARCH ESO OBS TARG NAME`) and their instrument setup (i.e., `HIERARCH ESO INS MODE`)

- if exps from multiple OBs have the same obj name ESOReflex will automatically process them together
- Otherwise you have 2 choices:
 1. Editing the exps keyword: `HIERARCH ESO OBS TARG NAME`
 2. Changing the OCA rules

Changing OCA rules

- All frames (science and calibs) in the same directory
- Editing the muse_wkf.oca file

biases

MasterBias

arc lamp frames

Wave Cal

Edit parameters for DataOrganizer

OCA File: /sdp_test_data/evalenti/mysw/install/share/esopipes/muse-2.8.3/reflex/muse_wkf.oca **Browse**

Keywords to be displayed: OBJECT,INS.MODE,EXP.TIME,RA,DEC,TPL,EXPNO,DATE_OBS,OBS.PROG.ID,OBS.ID

Lazy Mode:

Use CalSelector associations:

Association preference: **MASTER CALIBRATIONS**

Bookkeeping Dir: \$BOOKKEEPING_DIR **Browse** **Configure**

class: org.eso.DataOrganizer **Configure**

Changing OCA rules

Default OCA

Modified OCA

```
495
496
497 minRet=2;
498 select execute(muse_exp_combine) from inputFiles
499   where REFLEX.CATG == "OBJECT" or REFLEX.CATG == "PIXTABLE_REDUCED" group by
500     OBS.TARG.NAME, INS.MODE as (TPL_A, combined_cubes);
```

```
495
496
497 minRet=2;
498 select execute(muse_exp_combine) from inputFiles
499   where REFLEX.CATG == "OBJECT" or REFLEX.CATG == "PIXTABLE_REDUCED" group by
500     INS.MODE as (TPL_A, combined_cubes);
```

```
1526
1527 action muse_exp_combine
1528 {
1529   minRet = 2; maxRet = 2000;
1530   select file as PIXTABLE_REDUCED from calibFiles where REFLEX.CATG ==
1531     "PIXTABLE_REDUCED"
1532     and inputFile.INS.MODE==INS.MODE
1533     and inputFile.OBS.TARG.NAME==OBS.TARG.NAME;
1534   minRet = 2; maxRet = 2000;
1535   select file as IMAGE_FOV from calibFiles where REFLEX.CATG == "IMAGE_FOV"
1536     and inputFile.INS.MODE==INS.MODE
1537     and inputFile.OBS.TARG.NAME==OBS.TARG.NAME;
1538
1539   minRet = 0; maxRet = 1;
```

```
1526
1527 action muse_exp_combine
1528 {
1529   minRet = 2; maxRet = 2000;
1530   select file as PIXTABLE_REDUCED from calibFiles where REFLEX.CATG ==
1531     "PIXTABLE_REDUCED"
1532     and inputFile.INS.MODE==INS.MODE;
1533   minRet = 2; maxRet = 2000;
1534   select file as IMAGE_FOV from calibFiles where REFLEX.CATG == "IMAGE_FOV"
1535     and inputFile.INS.MODE==INS.MODE;
1536
1537   minRet = 0; maxRet = 1;
1538   select file as FILTER_LIST from calibFiles where REFLEX.CATG == "FILTER_LIST"
1539     and inputFile.INSTRUME==INSTRUME;
```

By removing OBS.TARG.NAME, ESOReflex will automatically process all frames tagged by the same INS.MODE keyword contained in the same working directory you setup
