Nu in uw Kabinet

# Happy Birthday Queen Beatrix!!!!

Yearly in Amsterdam on April 30th

King of Spain!

King of Spain!

“Porque no te callas!?” = “Why don’t you shut up!?”

“Porque no te callas!?” =“Why don´t you shut up!?”

“Porque no te callas!?” = “Why don’t you shut up!?”

# My research interests:

- Star cluster population studies
- The cluster initial mass function
- Maximum cluster mass
- Evolution in a tidal field
- Disruption by giant molecular clouds
- Age distribution

SMC

M51

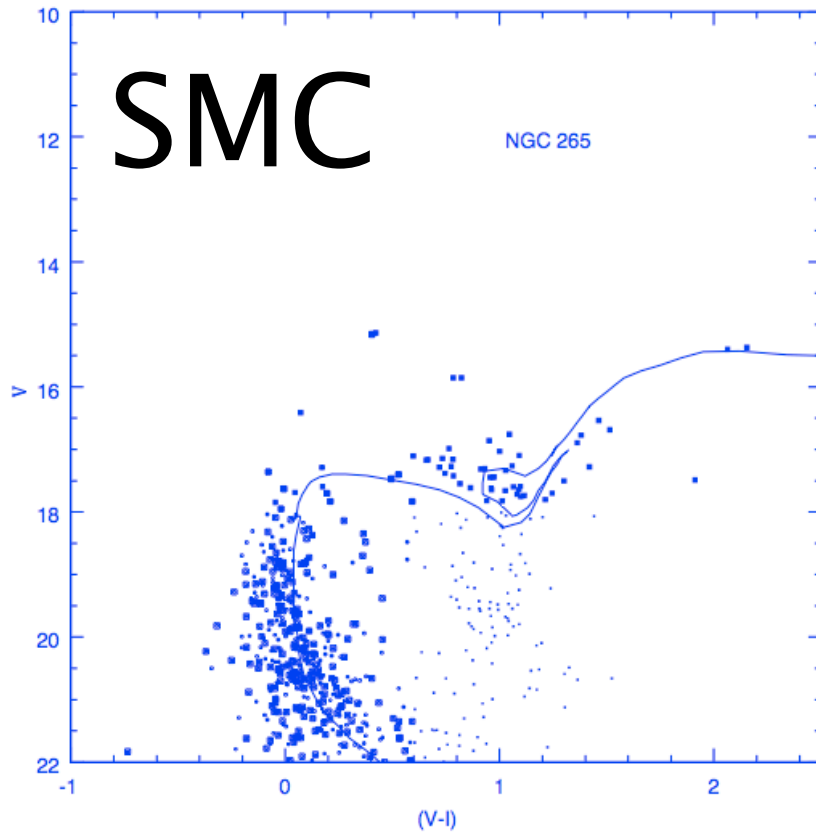

# Some anonymous star clusters in M51

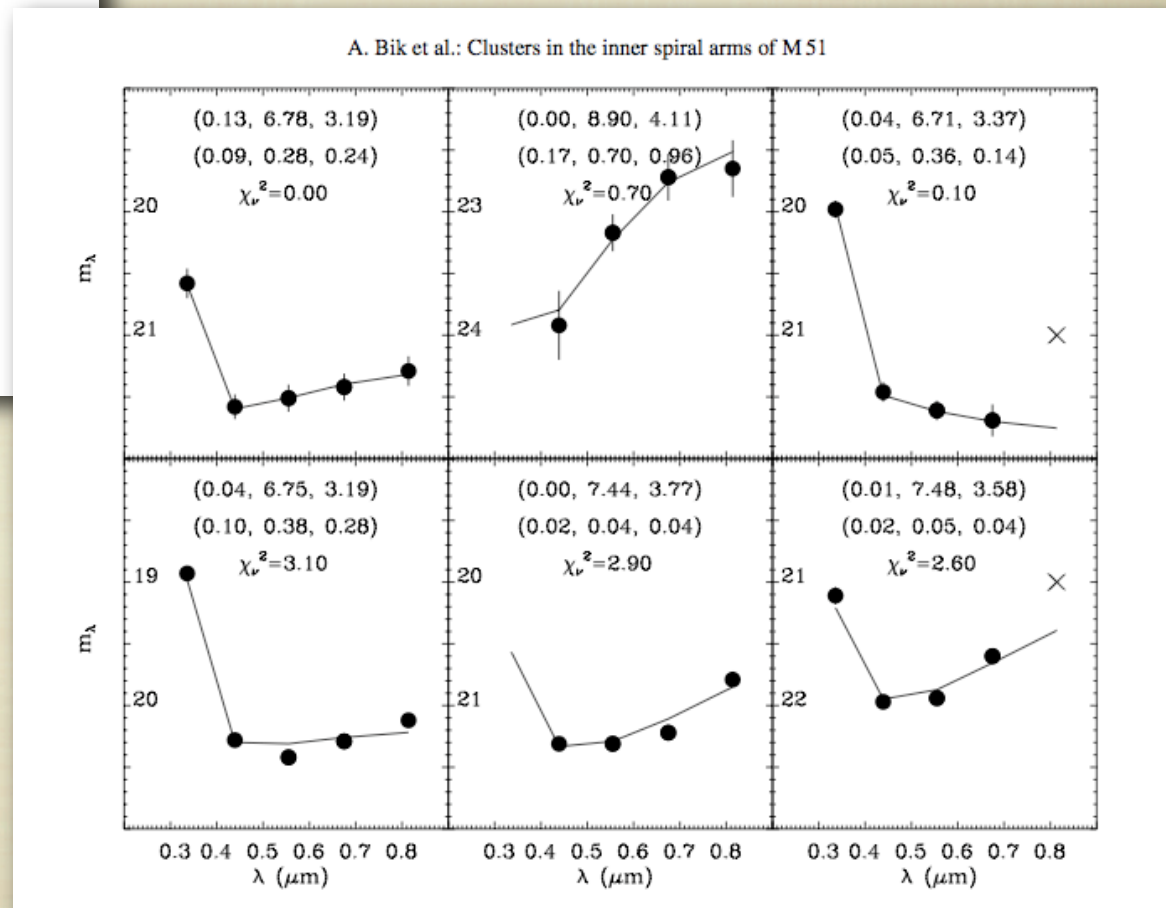

Scheepmaker et al. (2007)

# Deriving ages

## M51

Chiosi (2006)

Bik et al. (2003)

# Cluster luminosity function

$$dN/dL \propto L^{-\alpha}, \text{ with } \alpha \simeq 2$$

Larsen (2002)

Random sampling  
from a power-law function  
with index -2:

$$L_{\max} \propto N$$

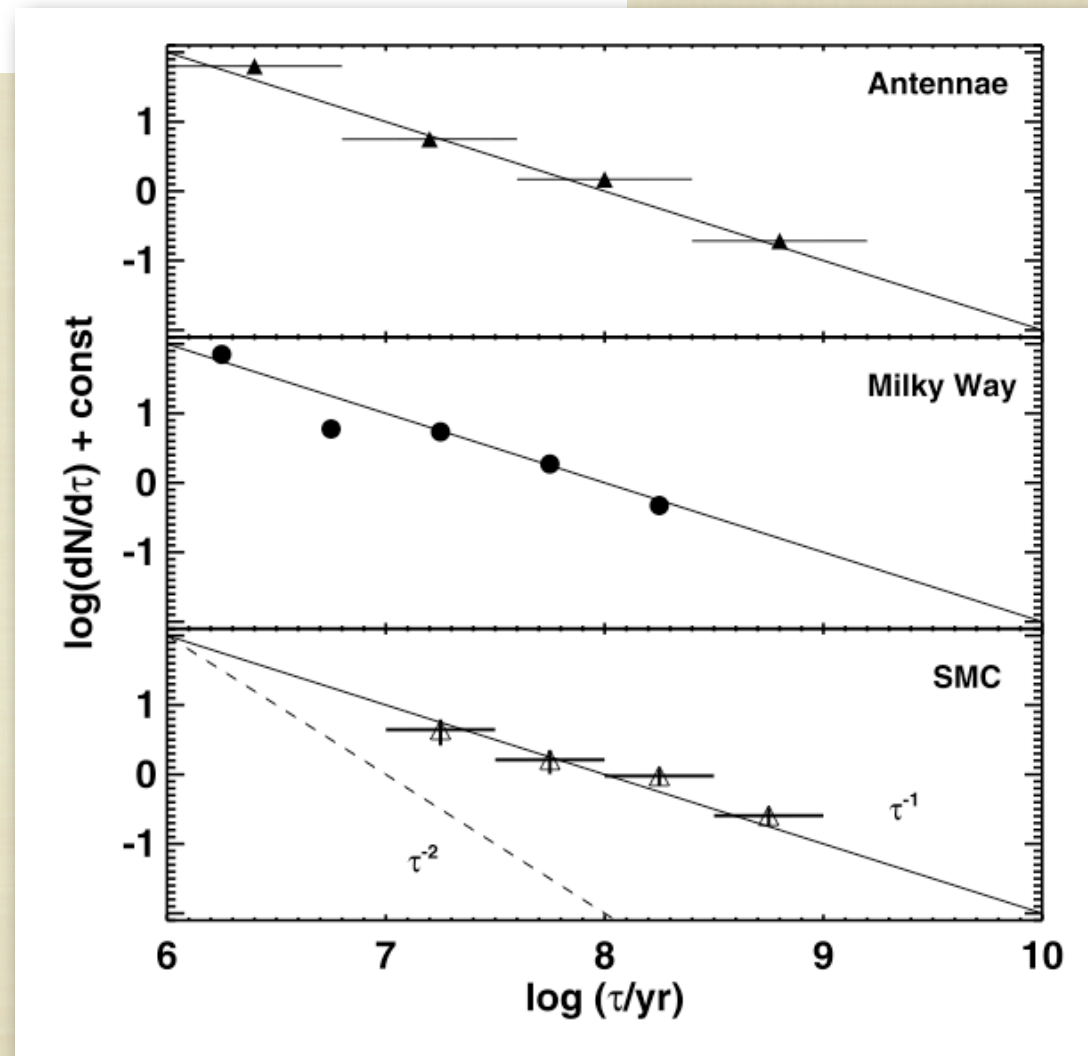

Whitmore (2003)

Mass independent destruction of 90%  
of the clusters per age dex:

$$dN/dt \propto t^{-1}$$

A universal  
disruption  
model?

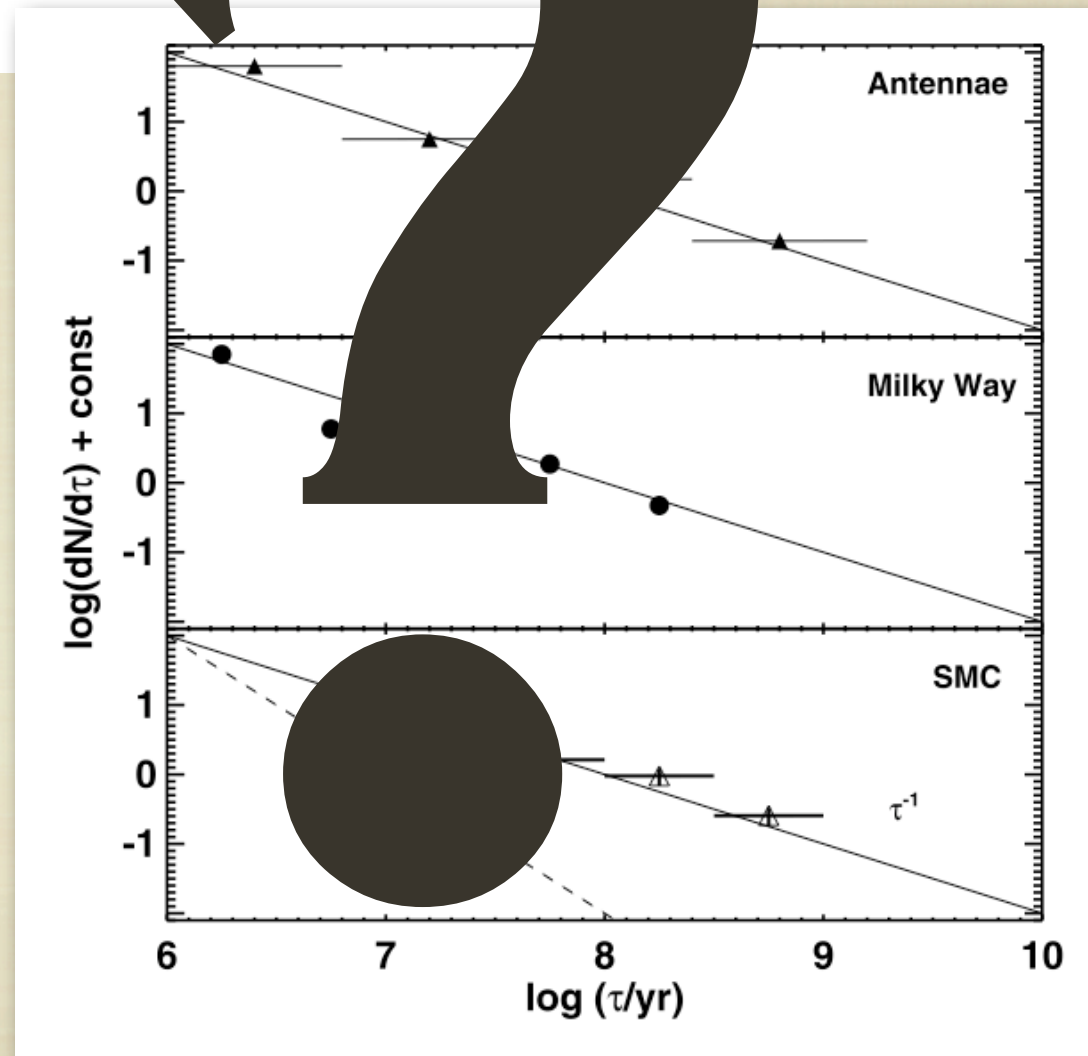

Whitmore et al. (2007)

Mass independent destruction  
of the clusters per age

$$dN/dt \propto t^{-1}$$

A universal  
disruption  
model?

Whitmore et al. (2007)

Hunter et al.  
(2003); Gieles  
et al. (2006)

Formed:

$dN/dt = \text{constant}$

Hunter et al.  
(2003); Gieles  
et al. (2006)

Formed:

1

10

100

1000

$dN/dt = \text{constant}$

Surviving:

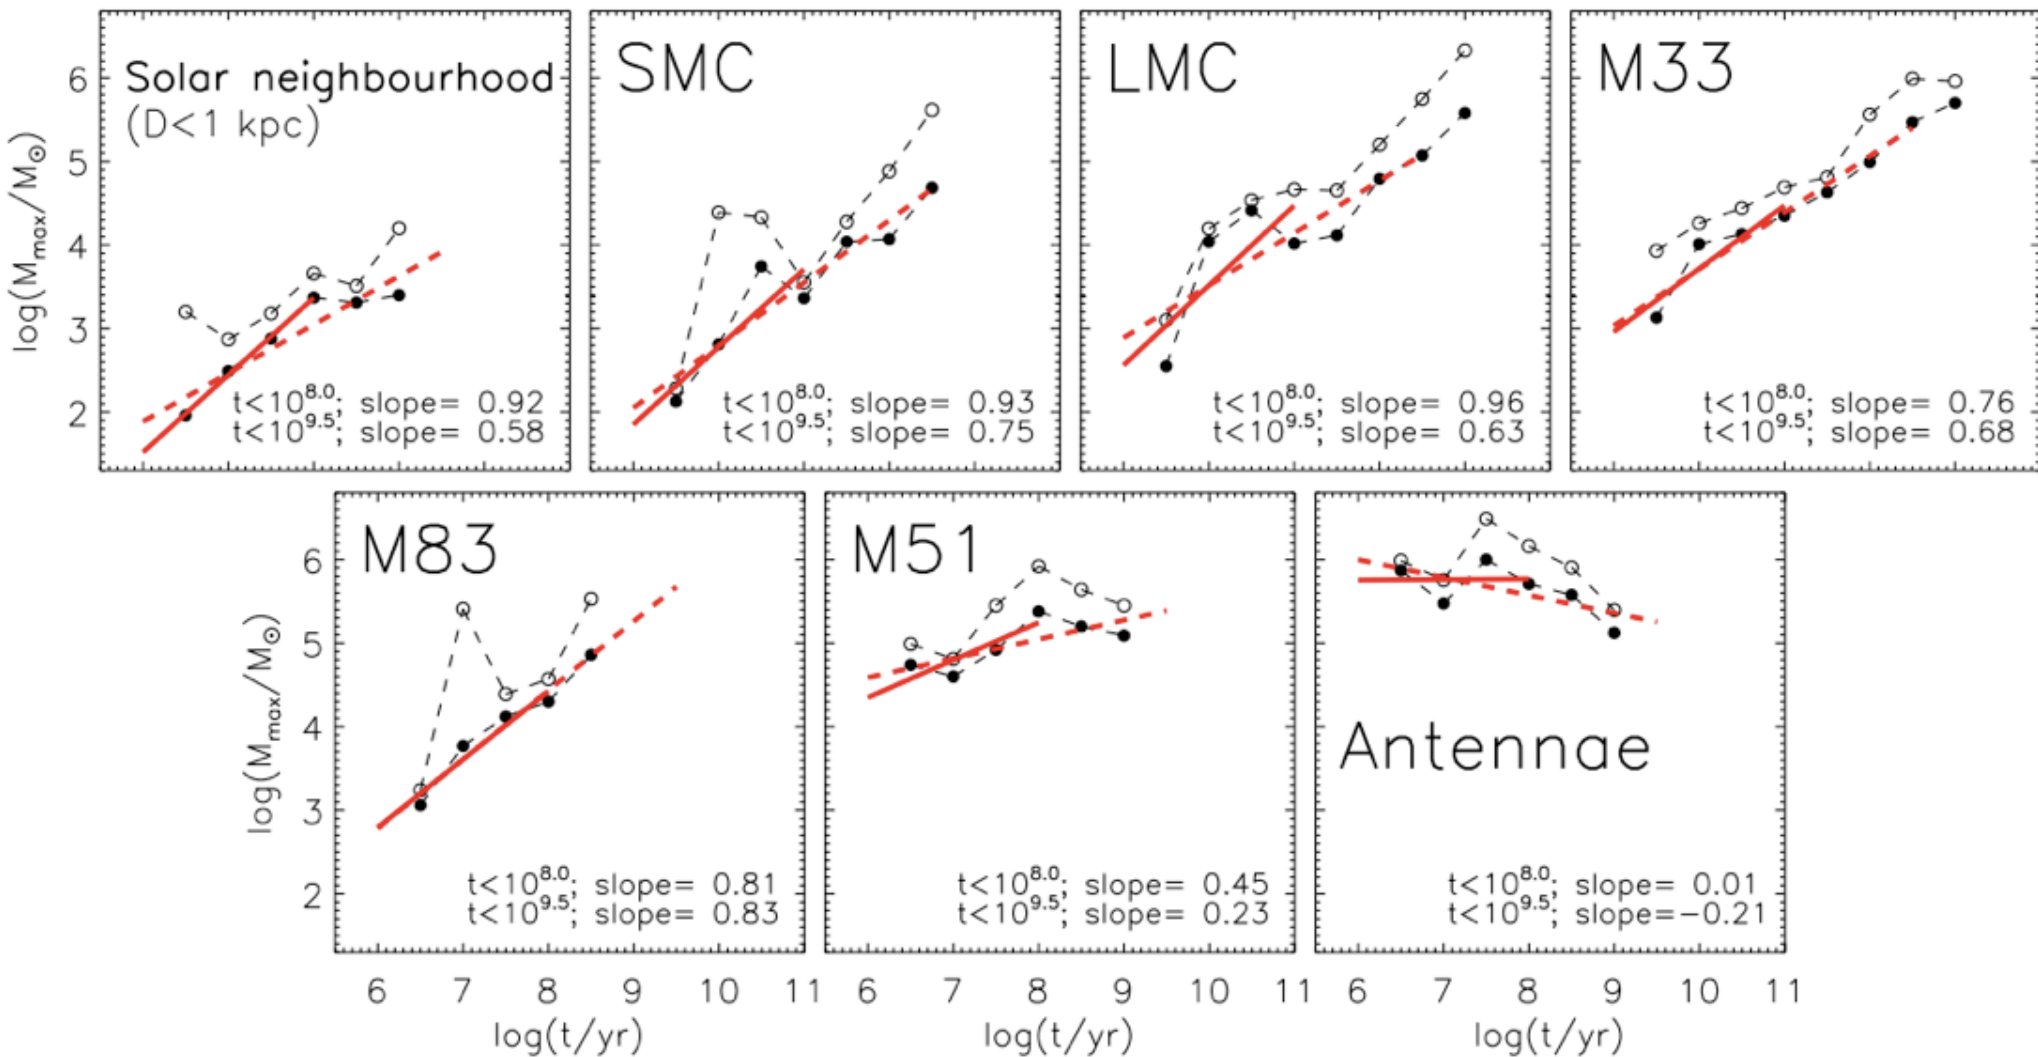

1

1

1

1

$dN/d \log t = \text{constant}$

Gieles & Bastian, submitted

- Constant CFR
- $dN/dM \propto M^{-2}$
- mass limit

- Constant CFR
- $dN/dM \propto M^{-2}$
- mass limit

- Constant CFR
- $dN/dM \propto M^{-2}$
- DETECTION limit

- Constant CFR
- $dN/dM \propto M^{-2}$
- DETECTION limit

Limiting detection in  $U$   
 results in  $dN/dt \sim t^{-1}$

Hunter et al. (2003); Gieles et al. (2006)

# SMC $dN/dt$ from isochrone ages

FIG. 4—The age distribution for all SMC clusters in the 4-m fields. Wielen's (1971) distribution for Galactic clusters is also shown, normalized at  $10^8$  yrs. Units in the ordinate are clusters per  $10^8$  yrs.

Hodge (1987)

Gieles, Lamers & Portegies Zwart (2007)

# SMC

$$M \gtrsim 10^2 M_{\odot}$$

FIG. 4—The age distribution for all SMC clusters in the 4-m fields. Wielen's (1971) distribution for Galactic clusters is also shown, normalized at  $10^8$  yrs. Units in the ordinate are clusters per  $10^8$  yrs.

Hodge (1987)

# M51

$$M > 10^{4.5} M_{\odot}$$

Bastian et al. (2005);  
Gieles et al. (2005)

# SMC

$$M \gtrsim 10^2 M_{\odot}$$

# M51

$$M > 10^{4.5} M_{\odot}$$

$$t_{\text{dis}}(\text{SMC}) \simeq 100 \times t_{\text{dis}}(\text{M51})$$

FIG. 4—The age distribution for all SMC clusters in the 4-m fields. Wielen's (1971) distribution for Galactic clusters is also shown, normalized at  $10^8$  yrs. Units in the ordinate are clusters per  $10^8$  yrs.

Hodge (1987)

Bastian et al. (2005);  
Gieles et al. (2005)

## Disruption by GMCs

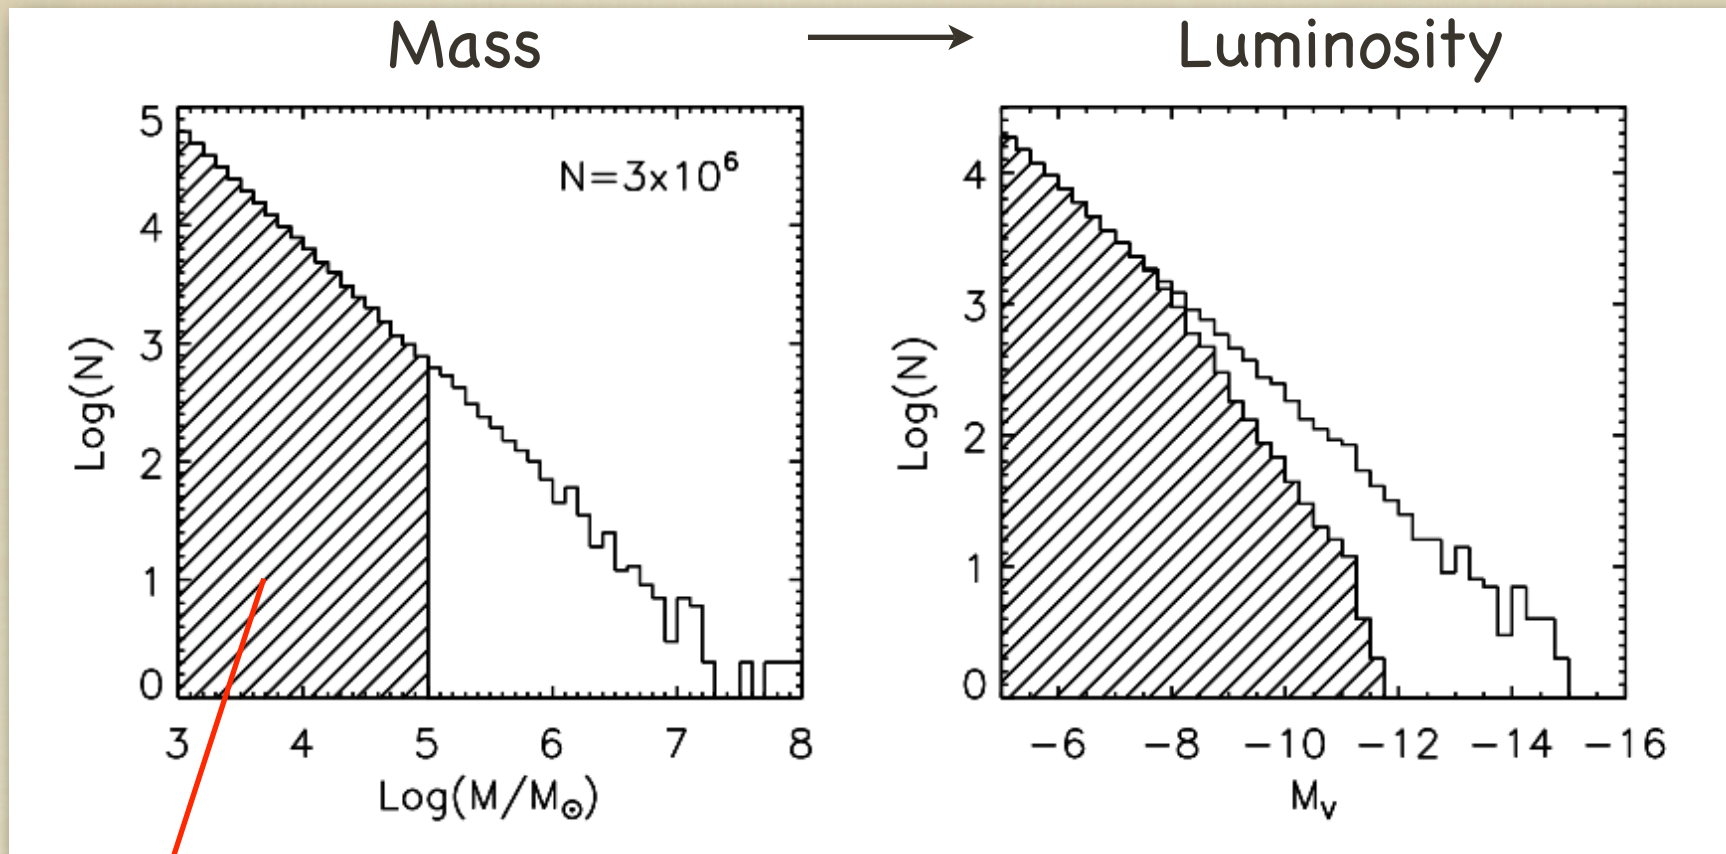

$$t_{\text{dis}} \propto \rho_c / \rho_n$$

Gieles et al. (2006)

# Study mass function truncation through luminosity function

Larsen 2006

$$N \propto SFR \times \Delta Time \times Area$$

(more details in: Gieles, Larsen, Bastian & Stein 2006)

# The LF of $\pm 5000$ star cluster in M51

Gieles, Larsen et al. (2006b)

# Young star clusters:

- Universal power-law initial mass function (index -2)
- Mass function truncated around  $\sim 10^6 M_{\odot}$
- Disruption time strongly dependent on environment

# Young star clusters:

- Universal power-law initial mass function (index -2)
- Mass function truncated around  $\sim 10^6 M_{\odot}$
- Disruption time strongly dependent on environment

**How to get youtube movies in your presentation:**

\* save source as flash file on [www.keepvid.com](http://www.keepvid.com)

\* convert to .mov or .avi using ffmpegX
